

COP3337
Summer 2020- Project 2

Read through the document. Study the package structure and UML diagrams carefully. All the steps you need to do to complete the project are listed at the end of this document. Please download the Project2 zipped file which can be found on the canvas assignment page. This zipped file contains the shell of the project.

Important:

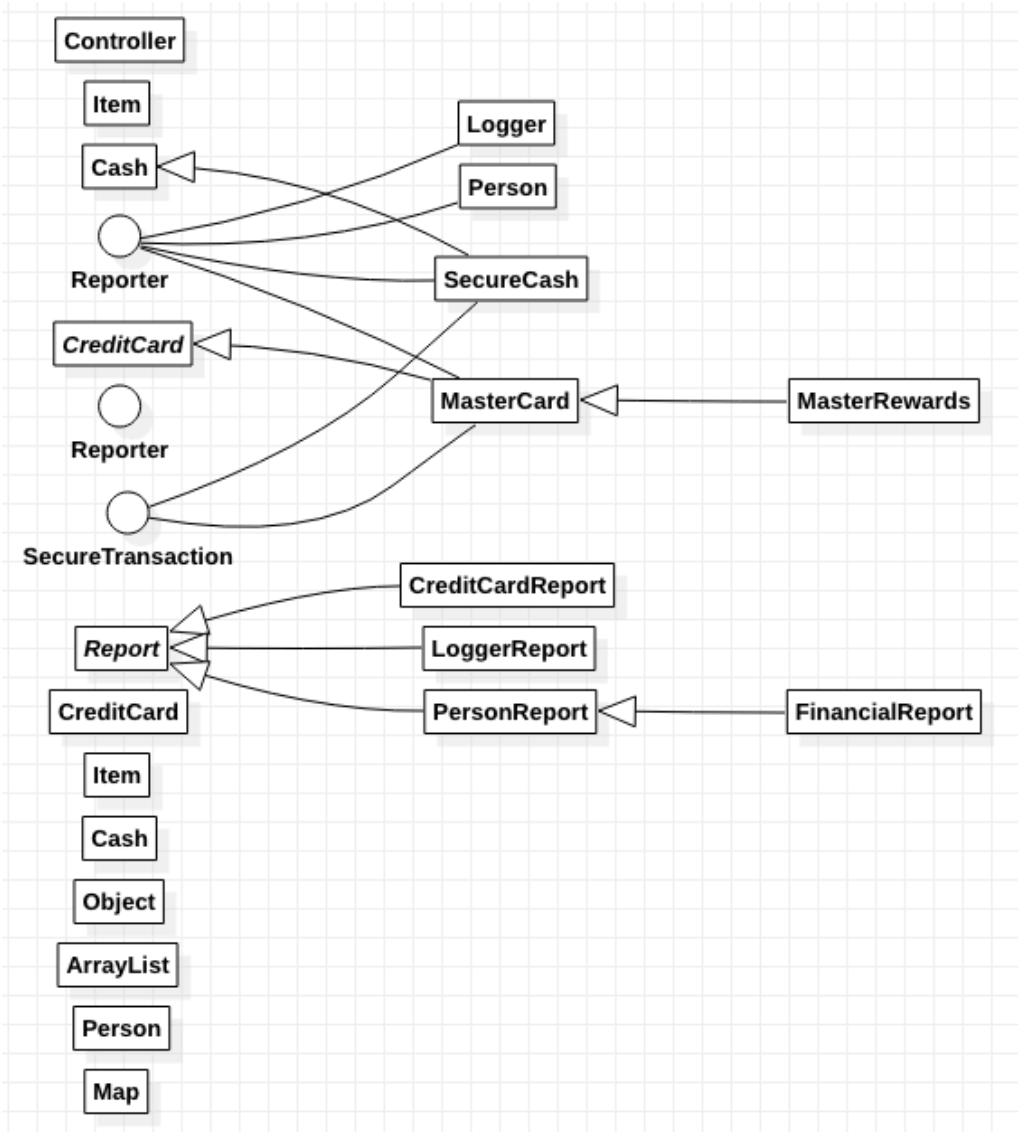

Do not copy someone's code. You may be randomly selected to explain your code. If you cannot explain your code, you will get a zero for the project grade. If you are stuck please ask me. I will gladly help you. Remember the goal is to learn. 😊

Package Structure

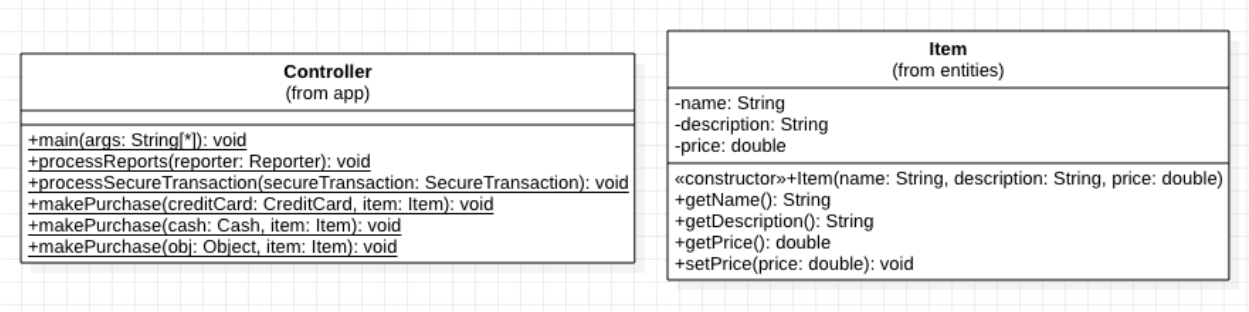

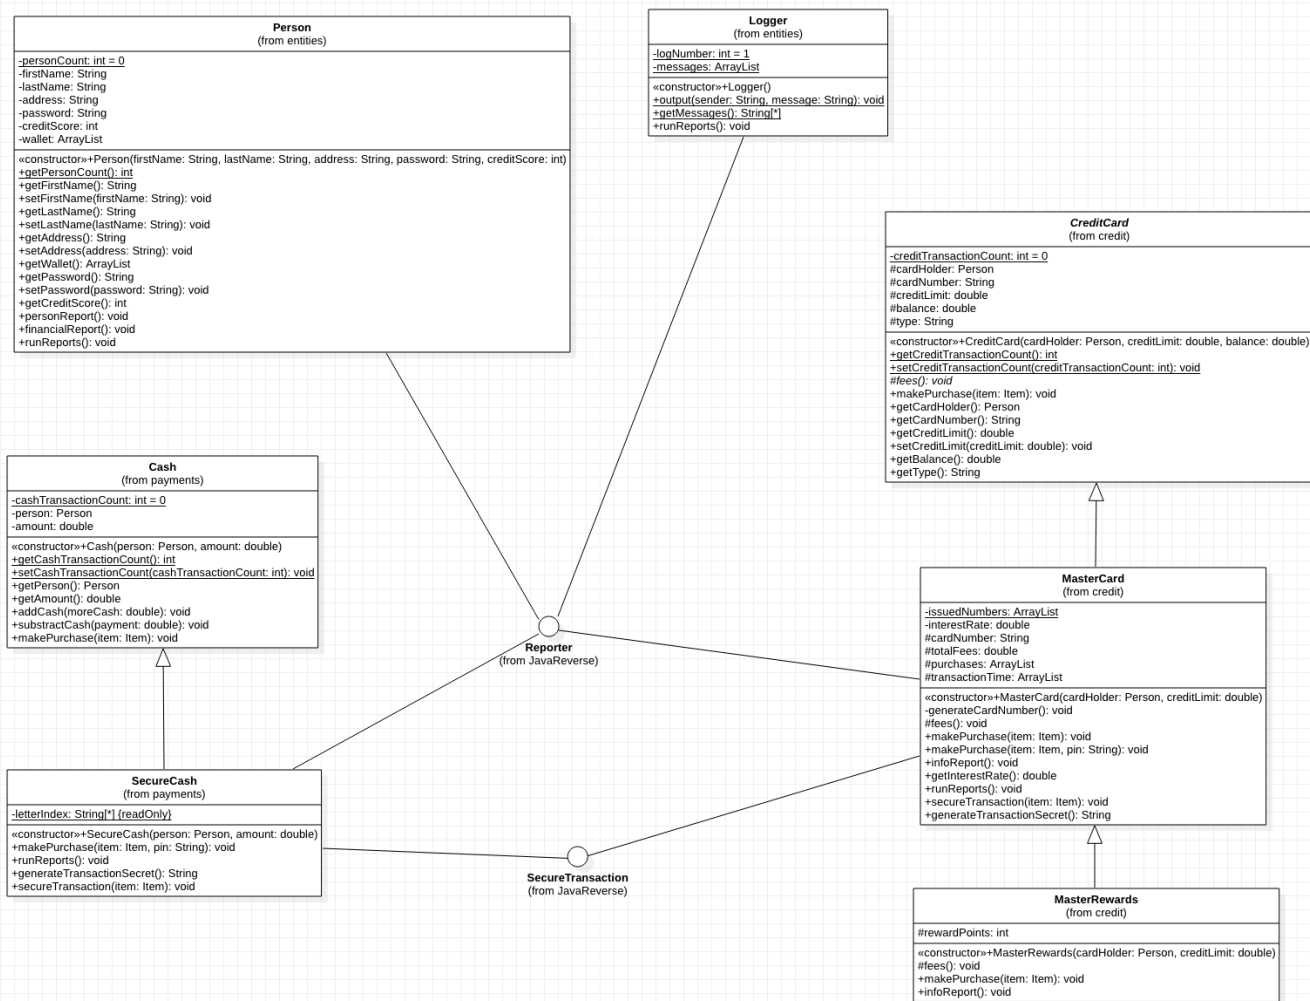

UML

Hierarchy Structure

UML Class Diagrams and Connections

Steps you need to do:

Step1: (Controller.java)

```
System.out.println("////////////////////////////////////////");
System.out.println("Section 1");
System.out.println("////////////////////////////////////////");

// STEP 1

    // create four items instance
    // with the following data

    /*
    item 1 data -> "Mitutoyo 513-403-10E",
                  "DIAL TEST INDICATOR, BASIC SET, STANDARD, .008 IN, . 0001 IN GRAD, WHITE DIAL ",
                  139.16

    item 2 data -> "Garmin Forerunner 935",
                  "Premium GPS running/triathlon watch with wrist-based heart rate ",
                  284.49

    item 3 data -> "CROC Classic Clog",
                  "Iconic clog that started a comfort revolution around the world",
                  40.99

    item4 data -> "Adidas Ultra Boost PB",
                  "Offers a plush, yet bouncy ride with an updated upper is built for speed.",
                  105.95

    item5 data -> "Macbook Pro 13",
                  "1.4GHz quad-core 8th-generation Intel Core i5 processor",
                  1399.00

    // YOUR CODE HERE

    // create 3 person instances
    // with the following data

    person1 -> "Ava", "Davis", "704 Brickell Ave", "Superman", 760
    person2 -> "John", "Smith", "340 S.W. 13 Street", "myPassword123", 680
    person3 -> "Bill", "Johnson", "100 Ocean Dr. S.W. ", "Mom12345", 530

    // do you have passwords like this ..... :)

    // YOUR CODE HERE

//you will not have any output from this step see project document output section

/*
```

Console output from this step

```
////////////////////////////////////////
Section 1
////////////////////////////////////////
```

Step2: (Controller.java)

```
System.out.println("");
System.out.println("////////////////////////////////////////");
System.out.println("Section 2");
System.out.println("////////////////////////////////////////");

// GOTO THE MASTERCARD CLASS AND WRITE THE CODE FOR SECTION 2.1 FIRST

// Setting up Ava's wallet
// Create cash instance for Ava -> person1 with $400
// make sure that you wrote section 2.1 code before write this code
// Create Master Card instance for Ava -> person1 with credit limit of $3500
// YOUR CODE HERE

// add the cash and master card instance to Ava's wallet
// YOUR CODE HERE

// runner a financial report on Ava
//YOUR CODE HERE

// Setting up John's wallet
// Create cash instance for John -> person2 with $400
// Create Master Card instance for John -> person2 with credit limit $500
// Create Master Reward instance for John -> person2 with credit limit $1500
// YOUR CODE HERE

// add the cash, master card and master reward instance to John's wallet
// YOUR CODE HERE

// runner a financial report on John
//YOUR CODE HERE

// Setting up Bill's wallet
// Create secure cash instance for Bill -> person3 with $1000
// Create Master Card instance for Bill -> person3 with credit limit $1000
// Create Master Reward instance for Bill -> person3 with credit limit $1500
// YOUR CODE HERE

// add the secure cash, master card and master reward instance to Bill's wallet
// YOUR CODE HERE

// runner a financial report on Bill
//YOUR CODE HERE
```

Console output from this step

```

Card Holder:	Ava Davis
Number:	7210 7907 7451 1639
Interest Rate:	10.99%
Credit Limit:	3500.00
Balance:	1822.65
Remaining Credit:	1677.35
Fees:	40.06
Transaction Count:	3

Step8: (Controller.java and Others)

```
System.out.println("");
System.out.println("////////////////////////////////////////");
System.out.println("Section 8");
System.out.println("////////////////////////////////////////");

    System.out.println("\n\n\n");
    System.out.println("-----");
    System.out.println("SECURE INTERFACE");
    System.out.println("-----");

    // Here you are working with interfaces...
    // PAY ATTENTION TO TYPES OF AN OBJECT
    // ask yourself the question what are all types the object you are
    // working with can be

    // processReport is in this class

    // run the process report with Ava's master card object
    // run the process report with BILL's secure cash object

    // WHY DO THESE NOT WORK
    // processSecureTransaction on the person1 object
    // processSecureTransaction no the logger object

    // why does this work ----> does it implements SecureTransactions
    // processSecureTransaction on the mcReward3 object

    // YOU WILL NEED TO ADD CODE THE NEED CLASSES IN THIS STEP TO MAKE IT WORK
    // YOU NEED FIGURE OUT WHICH CLASSES
    // YOUR CODE HERE

} // end main()
```

Console output from this step (NOTICE NO PINS IN OUTPUT)

```
-----
SECURE INTERFACE
-----
Ava Davis (MASTER CARD)  secure transaction pin:
Bill Johnson (SECURE CASH) secure transaction pin:
```

Step9: (Secure.java)

```
public String generateTransactionSecret(){

System.out.println("");
System.out.println("////////////////////////////////////////");
System.out.println("Section 9");
System.out.println("////////////////////////////////////////");

    //if you are cash type
    // take the first four letters of the Last name
    // then for each letter index letter to location in the alphabet
    // same index for upper and lower case
    // example
    // Index:  1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 ..... 25 26
    // Letter: a b c d e f g h i j k l m n o .... y z
    // mod each letter index by 10 to generate pin

    // Example: first Name = Richard
    // W   h   i   t  <- first four letters
    // 23  8   9   20 <- index to alphabet location
    // 3   8   9   0  <- %10
    // 3890 <- final pin

    String pin = "";

    //YOUR CODE HERE

    return pin;
}
```

Console output from this step

```
////////////////////////////////////////
Section 9
////////////////////////////////////////
Bill Johnson (SECURE CASH) secure transaction pin:0584
```

Step10: (MasterCard.java)

```
public String generateTransactionSecret(){

System.out.println("");
System.out.println("////////////////////////////////////////");
System.out.println("Section 10");
System.out.println("////////////////////////////////////////");

    // if you are a credit card type
    // from left to right make the pin from following digits of the card number
    // 1, 5, 9, 13
    // Example
    // 2341 4833 9332 9933    <- card number
    // 2    4    9    9      <- selected number
    // pin is 2499           <- generated pin

    String pin = "";

    // YOUR CODE HERE

    return pin;
}
```

Console output from this step

```
////////////////////////////////////////
Section 10
////////////////////////////////////////
Ava Davis (MASTER CARD) secure transaction pin:3462

////////////////////////////////////////
Section 9
////////////////////////////////////////
Bill Johnson (SECURE CASH) secure transaction pin:0584
```

Step11:

You are done 😊

Zip your project and upload it using the canvas assignment link.

Hope you found this project a good learning exercise. It is a little overwhelming to look at all this code and make sense of it, but I believe you understand coding a little better after this project. In time you will be very good at this. ^| ^
